

– PRESS RELEASE –

The Renewable Taos Lecture Series is sponsoring ***A Conversation on the Future of Renewable Energy*** with Luis Reyes of Kit Carson and William Brown of Renewable Taos. The event will be held at the KTAOS Solar Center, Wednesday March 26, 6-9 P.M.

Renewable Taos will announce its **Go Solar Today!** campaign to expand Solar Energy at homes and businesses at the event. According to John Gusdorf, "There is no financial barrier to solar energy at residences and small businesses. Current prices for solar systems work out to around the same monthly expense as current electric bills. Financing for home and business owners is readily available. It's a safe, high return investment that pays for itself in a few years and yields immediate returns."

Mary Emery commented, "Solar provides our electricity and also charges our electric car. We not only save on our electric bill but our gasoline bill as well."

Prior to the program, Friday Motors will be demonstrating their new electric vehicles at the KTAOS Solar Center.

Bob Bresnahan of Renewable Taos commented, "Mary, John and I are showing off our new Chevy Volts Wednesday night. My wife Emily and I have had ours since December and are getting 135 mpg over more than 4000 miles of driving. The Volt is like the Prius ten years ago – the most fuel efficient car on the market for many drivers."

.
Bresnahan said, "Come early and see how you can drive virtually emissions free and power your home and business with solar energy. The KTAOS Bar serves drinks and dinner. Also, talk to us about how you can help in our Behind the Meter Campaign. We want to see the number of solar systems in the Enchanted Circle grow dramatically over the next two years."
